How do you make a better dock?

Simple... Finish it with a better surface.

At **SunWalk®** we are obsessed with making the best decking surfaces. Decking designed to not only weather the elements, but tough enough to stand up to serious waterfront use.

The large format goes down quick and uses **50%-60% fewer fasteners.** No maintenance, non-slip, UV protected and tougher than other decking products.

Safer – Our **ADA compliant** non-slip surface offers superior traction and comfort, wet or dry, rain or shine. Sunwalk® keeps you safe and steady.

Stronger – Our Microcellular Core Manufacturing Technology delivers enhanced strength and impact resistance for **long-lasting performance.**

The Environmental Leader – Our 45% open surface lets sunlight reach habitats, preserving ecosystems. Build durable, stunning access while **protecting the environment** with SunWalk®

Marine Tough – Engineered to withstand relentless **UV exposure, high winds, storm surge**, and heavy loads – day in, day out. While others fail, SunWalk® keeps performing, looking great in the harshest environments.
